**FEEDING DIRECTIONS:** Each horse is unique and should be fed to maintain desired body condition and performance. Feeding rates need to be adjusted according to the horse's condition and training or competition schedule. Split the recommended feeding levels into two or more feedings each day. As a complete feed, provide at the rate of 1.5 to 2 lbs per 100 lbs of bodyweight per day. Or along with forage, feed at the rate of 0.5 to 1.0 lbs per 100 lbs bodyweight per day along with a good, clean quality hay or pasture equivalent at the rate of 1 to 1.5 lbs per 100 lbs of bodyweight daily. Make all feeding changes gradually over a two week period. Provide plenty of fresh, clean water at all times except to hot, tired horses. Horses should be cooled out properly before having access to unlimited water or being fed. Horses should have their feeding rate reduced when exercise is reduced. Salt should be available free choice.
