

# U CAPPERS FOAL & BROODMARE

## Feeding Directions

**Foals:** Beginning at one week of age, feed up to one cup per day using creep method. Gradually increase to six pounds to avoid digestive disturbance.

**Broodmares:** Feed six pounds per day until foaling then increase feeding level to nine pounds per day to compensate for foal milk requirements.

**Out of Condition Horses:** Feed six to nine pounds per day depending on size and weight. Use for horses that are overstressed (i.e. coming off the track or show or jumping circuit) or debilitated by worms.

This feed is formulated to meet the special nutritional requirements of the broodmare, her foal and the stallion at service. Also widely used as a "Builder Feed" for the underweight or out of condition horse.

## CAUTION

**THIS FEED CONTAINS ADDED LEVELS OF COPPER. DO NOT FEED TO SHEEP.**
