

# LAMB LAC POWDER

## Mixing and Feeding Directions

Always sprinkle Premier Lamb-Lac powder on top of warm water (110-120°F) and stir with a wire whip. Each enclosed level measure holds ¼ pound of powder.

1. Feed lambs at least one (1) time with colostrum (ewe's milk) within 12 hours of birth, if possible.
2. Mix one (1) lb. Premier Lamb-Lac with two quarts warm water, or ¼ lb. per one pint or 1/8 pound per ½ pint.
3. Warm (controlled) feeding: Birth to three days, feed four tablespoons milk (reconstituted) about every four hours. After three days gradually increase the amount of reconstituted Premier Lamb-Lac and decrease the number of feedings. At about 12 days of age increase Premier Lamb-Lac to 1/2 pint-three per day (this may vary for larger lambs). **\*Do not overfeed young lambs.** (Feed smaller volumes more often during the day.)

### Cold (free choice) feeding:

Reconstituted milk should be fed cold at about 40°F to prevent overeating. Assist young lambs starting on nipples as necessary.

4. At about one (1) week of age offer free choice of a high quality creep feed.
5. Fresh, clean water should be available at all times.
6. Lambs should be weaned at a minimum of 30 to 35 days and/or 25 to 30 pounds of weight.

## Guaranteed Analysis

CRUDE PROTEIN (Min)	24.0%
